The diagram shows a building layout with three rooms. The dimensions and area calculations are as follows:

- EFP (top room):** A square room with side lengths of 14. The area is calculated as $14 \times 14 = 196$.
- FFL BMT (middle room):** A large rectangular room with a width of 24 and a height of 21. The area is calculated as $24 \times 21 = 504$.
- FFL (right room):** A rectangular room with a width of 10 and a height of 15. The area is calculated as $10 \times 15 = 150$.

Additional dimensions and area calculations for smaller sections are shown:

- A small square section (14x14) is attached to the top of the EFP room, with an area of $14 \times 14 = 196$.
- A small rectangular section (8x4) is attached to the bottom of the FFL BMT room, with an area of $8 \times 4 = 32$.

A photograph of a white, single-story house with a green roof and green shutters, surrounded by trees. The house has a small front porch with a white door and a small window above it. The roof is covered in green shingles, and there is a brick chimney on the left side. The house is surrounded by bare trees, suggesting a winter or early spring setting. The overall appearance is that of a well-maintained, traditional suburban home.A photograph of a white, single-story house with a green roof and green shutters. The house has a small front porch and a white garage. A paved road is in the foreground, and a grassy lawn with some trees and shrubs is in front of the house.
